

Arthur Torres

Senior Full Stack Developer | React · Next.js · Node.js · TypeScript · PostgreSQL (8+ yrs)

San Cristóbal, Venezuela (Remote) · arthurtorres75@gmail.com · linkedin.com/in/arthur-torres-dev · github.com/ArthurTorres75

PROFESSIONAL SUMMARY

Senior Full Stack Developer and Computer Engineer with 8+ years of professional experience (Feb 2018 – present) building web and mobile products with React (6 yrs), Next.js (5 yrs), Angular (4 yrs), Node.js/NestJS (6 yrs), TypeScript (6 yrs), and PostgreSQL (5 yrs), deployed on AWS, Azure, and Vercel. Track record of measurable delivery: raised a 20+ page enterprise site from 60 to 100 on Google PageSpeed in 8 working days, migrated ~100 CMS posts off WordPress to Azure PostgreSQL, and cut load times on dashboards rendering millions of records from 90+ seconds to 13. Applies Clean/Hexagonal Architecture, TDD (Vitest), and Specification-Driven Development with AI tooling (Claude Code, GitHub Copilot) to ship production systems fast without sacrificing quality.

TECHNICAL SKILLS

Frontend (6 yrs): React, Next.js (App Router & Pages Router), Angular, TypeScript, JavaScript (ES6+), Tailwind CSS, Material UI, shadcn/ui, HTML5, CSS3/SCSS, React Native (Expo), Atomic Design, Vue.js

Backend (6 yrs): Node.js, NestJS, Express, REST APIs, Prisma ORM, serverless (Next.js API routes, Supabase Edge Functions), Stripe payments & webhooks, PHP/Laravel

Databases (5 yrs): PostgreSQL, MongoDB, Supabase, query optimization, caching, indexing

Cloud & DevOps (5 yrs): AWS, Azure (PostgreSQL, Blob Storage), CI/CD with GitHub Actions, Vercel, Firebase, Docker (containerized development environments)

Auth & Security (5 yrs): Auth.js, OAuth 2.0, JWT, role-based access control (RBAC), biometric auth (mobile)

Testing & Practices (6 yrs): Vitest, test-driven development (TDD), SOLID principles, DRY, Clean/Hexagonal Architecture, code review, Git/GitHub

AI-Assisted Engineering: Directs a spec-driven multi-agent workflow — Claude Code as orchestrator delegating to specialized subagents, docs grounded live via context7 — proposal → spec → design → tasks → implementation; GitHub Copilot for inline completion.

Integrations & Data Viz: Microsoft Dynamics 365, Microsoft Graph API, SendGrid, MailerLite, Google Maps API, Google Analytics 4, Search Console, Strapi CMS, Plotly, Chart.js, D3.js, GoJS, ExcelJS

Exploring / limited production use: Terraform (learning), Hostinger — exposure, not yet backed by a shipped production project

PROFESSIONAL EXPERIENCE

Full Stack Developer — Chamco Digital

Contract, Remote | Apr 2026 – May 2026

- Raised Google PageSpeed performance from 60 to 100 on a 20+ page enterprise website in 8 working days by implementing image lazy loading, response caching, optimized post queries, and database indexes for content search.
- Migrated ~100 blog posts from WordPress to Azure PostgreSQL with Prisma — fully retiring WordPress — by building a serverless Next.js backend connected to Azure Blob Storage for media; completed the decommission by migrating the production domain's DNS (Namecheap) to Vercel while preserving corporate email on the existing domain.
- Eliminated dependency on external publishing tools by building a custom CMS for posts, articles, and videos with full CRUD, categories, tags, and user management.
- Automated training-course registrations end to end by integrating the Microsoft Dynamics 365 REST API with confirmation emails via Microsoft Graph API, and enabled paid enrollments with Stripe Checkout and webhook verification.
- Achieved Lighthouse 90+ SEO scores and 142 URLs indexed in Google Search Console by executing a full technical SEO audit and configuring Google Analytics 4.
- Enabled safe continuous integration and deployment to Vercel by implementing the CI/CD pipeline from scratch with GitHub Actions — lint, typecheck, build, and security checks on every push — enforced locally with Husky pre-commit hooks.

Tech: Next.js 16 (App Router), React 19, TypeScript, Tailwind CSS v4, Prisma v7, Azure PostgreSQL, Azure Blob Storage, Auth.js v5, Stripe, Microsoft Dynamics 365, Microsoft Graph API, Google Analytics 4, Search Console, GitHub Actions, Vercel.

Frontend Developer — Fibotech

Contract, Remote (Mexico) | Feb 2025 – Jul 2025

- Cut telephony-analytics dashboard load times from 90+ seconds to 13 (~85% faster) by memoizing heavy aggregations with useMemo, removing unnecessary useEffect hooks, and optimizing React re-renders — delivering a fully fluid UI over millions of records.
- Visualized millions of mobile-subscriber records and their geographic locations by benchmarking multiple charting libraries (Plotly, Chart.js) and integrating the Google Maps API in Next.js 14/15 and TypeScript.
- Delivered client-defined monthly statistics with dynamic filters by aggregating and categorizing records by device type (Android, iPhone, other) and mobile carrier.
- Delivered the Gmykon corporate website from Figma designs to production on Vercel, collaborating with a development team through code reviews and QA testing — built the Next.js/TypeScript/Tailwind frontend and owned the full Strapi CMS configuration and content modeling.

Tech: Next.js, TypeScript, Tailwind CSS, Plotly, Chart.js, Google Maps API, Strapi CMS, Figma, Vercel.

Full Stack Developer — Crazy Imagine Software

Remote | Sep 2020 – Present

Deliver full-stack web and mobile products end to end for U.S.-based clients, working both independently and within development teams. Selected projects:

- Medikoch (healthcare platform, patient medical records): Performed a full technical audit identifying missing test coverage, outdated dependencies, and unprotected API endpoints, then hardened the API with rate limiting. Reproduced and fixed a critical bug causing 404 errors when editing patient records, tracing it to a disabled route through systematic local testing with custom database seeders. Migrated additional views from Blade to Vue.js and proposed the next phase (Vue 3 via Laravel's official Inertia + Vite path).
- MyMoldTech (project management platform): Replaced a manual SharePoint-based workflow by building a custom platform with client-defined projects, custom phases, an interactive timeline, payment tracking, and automated Excel/PDF report generation (React, Node.js, Express, MongoDB, ExcelJS).
- Speedy Delivery (mobile): Built a delivery app with React Native (Expo) and a NestJS + Prisma + PostgreSQL backend — biometric authentication, role-based access control, subscription billing via cron jobs, and SendGrid transactional email.
- OtherWorld Gift (e-commerce operations): Built inventory management, sales authorization with credit control, and a cash management system tracking revenue, payments, and bank transfers; automated Excel/PDF reporting, managed AWS infrastructure, and integrated Stripe payments.
- Piggyback Network: Built the NestJS + MongoDB backend and a fully responsive Next.js + Material UI frontend implemented from Figma designs.
- Little Taller (Earmarkz platform): Built pixel-perfect frontends from Figma designs, delivering UIs identical to the approved designs (React, TypeScript, Tailwind CSS, Material UI, Firebase).
- Montrix & Cloudshim: Shipped Angular applications with Angular Material design systems and custom data visualization using D3.js and GoJS — TypeScript enforced across all projects.

Tech: React, Next.js, React Native, Angular, Angular Material, TypeScript, NestJS, Express, Prisma, PostgreSQL, MongoDB, AWS, Stripe, Tailwind CSS, Material UI, Firebase, ExcelJS, D3.js, GoJS, JWT, PHP, Laravel, Vue.js.

Frontend Developer — Zippytech

Remote | Feb 2018 – Sep 2020

- Developed enterprise Angular systems featuring role-based access control, advanced table filtering, multi-format report generation, dashboards with dynamic visualizations, image uploads, and route tracking.
- Developed inside Docker containers on Linux as the shared development environment for an 8-person frontend and backend team, keeping local setups consistent across the team and eliminating environment drift between developers.

Tech: Angular, Angular Material, Bootstrap, SCSS, Docker, Linux.

SELECTED PROJECTS (AI-ASSISTED DEVELOPMENT)

- Echo-Vane — 2-player co-op mystery game (Hackathon, 2026): Built end to end in a company hackathon — two players solve a crime in real time, synchronized via Supabase Realtime, with i18next multilingual support (React 19, Kaboom.js, Vite, TypeScript).
- Mountain Portfolio (2026): Interactive 3D portfolio built as an explorable world — terrain generation, character controller, dynamic lighting — inside a Next.js app (Three.js, TypeScript, Vitest).
- School Management System (2026): Full-stack platform with modular architecture — students, courses, enrollment, grades, RBAC — including automated enrollment reminder emails via Supabase cron jobs and Edge Functions integrated with MailerLite (Next.js, Prisma, PostgreSQL, Supabase, shadcn/ui, Vitest, Playwright).

EDUCATION & CERTIFICATIONS

Computer Engineering (Ingeniero en Informática) — University Institute of Agro-Industrial Technology, 2008–2013

- Academic projects: C, MySQL — Computer Engineering coursework (2008–2013), not used professionally since
- AI Development from 0 to Production — MoureDev · Big School (Mar 2026)
- In progress: AWS Technical Fundamentals I & II — AWS Skill Builder; AWS and Terraform — Udemy

Languages: Spanish (native) · English (professional working proficiency)
